

The foundation of airmanship

Flight discipline

Flight discipline is the foundation of flight safety as many accidents could have been avoided if standard operating procedures or the rules of engagement had existed or been respected. Many operators attempt to implement compliance by decree with detrimental effects on the safety culture.

Our approach is through education and awareness that uncompromising discipline and compliance will prevent most of the traditional, avoidable safety events. In our Flight Discipline workshops we expand on the origins of procedures and the historical reasons behind their logic and existence.

We promote the understanding of the effects of pilot personality and culture, also emphasizing the importance of Disciplined Attention, threat-based flight planning and communications discipline. Attendees will learn when to draw the line to avoid falling into “the slippery downhill path of non-compliance” (Tony Kern).

Ultimately, we strive for the establishment of good habits in our trainee’s operation that will, in due course, become second nature and form a basic pillar for a safe and efficient operation.

Contact us today so that we can discuss a tailored solution for your operational needs.
